EDUCATION

Bachelors of Science in Computer Science and Applied Mathematics — *Texas A&M University*
Minors in Cybersecurity and Statistics — *May 2025*
Certificate of International Engineering
GPA: 3.93

Honors: President's Endowed Scholar, National Merit Scholar, U.S. Presidential Scholars Candidate

TECHNICAL SKILLS

Programming Languages: C, Python, Java, C++, Bash, C#, SQL, JavaScript, R, SystemVerilog
Software and Embedded Experience: ARM, RTOS, BSP/ASP development, low-level drivers
Tools: Git, AWS (Lambda, S3, DynamoDB), JUnit, React.js, Node.js, Groovy

EXPERIENCE

Embedded Software Engineer at Green Hills Software — *June 2025 - Current*

- ➢ Developing a secure real-time operating system for microcontroller-based embedded systems
- ➢ Creating board and architecture support packages for ARM Cortex-M class processors
- ➢ Leading board bring-up and hardware initialization for NXP microcontrollers
- ➢ Designing and implementing client-server APIs and low-level drivers for communication protocols
- ➢ Implementing and documenting peripheral drivers with attention to register-level correctness
- ➢ Presenting technical and proof-of-concept demonstrations for internal and external stakeholders
- ➢ Integrating third-party platforms for customer demonstrations and industry trade shows
- ➢ Debugging and validating embedded systems to diagnose low-level firmware and register-level issues

Software Engineering Intern at USAA — *May 2024 - August 2024*

- ➢ Designed and implemented RESTful APIs for monitoring system health
- ➢ Contributed to stand-ups, sprint planning, and retrospectives in an Agile development team
- ➢ Built file encryption and decryption tools for secure NFS environments
- ➢ Developed unit and integration tests using JUnit and Groovy
- ➢ Worked with AWS services including Lambda, S3, and DynamoDB

Undergraduate Teaching Assistant — *August 2024 - May 2025*

- ➢ Led a lab session teaching fundamental programming concepts and C++
- ➢ Mentored students at review sessions and office hours

Cybersecurity Programming Intern at Haystax Technology — *September 2020 - May 2021*

- ➢ Developed insider threat detection technology using Bayesian networks and LLMs
- ➢ Implemented an automated probabilistic analysis system to identify system vulnerabilities

ACTIVITIES

High Performance Computing Team — *May 2024 - May 2025*

- ➢ Optimized and parallelized multi-node molecular dynamics simulations on NAMD
- ➢ Collaborated with the Texas A&M High Performance Research Computing organization to build a cluster
- ➢ Competed in the international SC24 student cluster competition

Texas Aggie Game Developers — *August 2023 - Current*

- ➢ Developing strategy and rogue-like games using Unity and C# to compete in semester-long game jams
- ➢ Awards: Best Overall (Spring 2024), 2nd Overall (Fall 2024), multiple category wins
